INTRODUCTION

The present research entitled “The use that teachers make of technological audiovisual aids in the subject: Advanced Intensive English II of 3rd year of the Foreign Languages Department in the University of El Salvador, semester I 2012” has been selected due to the importance of audio visual aids in education and especially to get answers if they contribute to the optimal development of the four macro-skills in students.

All along this project, it is going to be presented significant information about how audiovisual aids were born and how they have been developed through the years, likewise how its use has been incorporated into the daily lives of students and teachers. Also, this useful research will give a better understanding of which are the most used technological audiovisual aids in the Foreign Languages Department as well as their effectiveness.

On the other hand, it could help teachers to know more about the use of these tools in classes and provide better teaching through them. Besides that, it is taken into consideration not only the use but also which are the audio visual aids available in the Foreign Language Department, the frequency with which they are used by teachers and the impact of those in students. Finally, with the information gathered, it is expected to benefit the Foreign Languages Department with valuable and accurate information to promote the use of audiovisual aids and request updated equipment in order to deal with this competitive world.
